Pipeline Ancillaries

Strainers and Filters   FI 1.01

Gasfilter for High Pressures
MANKENBERG

Technical Data

Connection DN	15 - 250
Connection G	3/8 - 2
Nominal Pressure PN	16 - 160
Temperature	80 °C
Medium	gases

Description

Gas filters protect plant and equipment such as regulators, valves, measuring equipment, safety valves and burners against damage or operational failure caused by contamination. They are essential for start-up as well as continuous operation. In systems equipped with multiple tube filters they may be used as a bypass filter instead of costly additional standby filters.

Cleaning is extremely simple and quick thanks to the quick-release locking of the filter element.

flow direction → filter insert

supporting seeve — filter mat — supporting seeve — frame — quick closure

Installation can be carried out in any position; installation with the cover at the bottom is recommended.

Standard

» filter medium made of skeletal polyester foam (for pore size and number of sheets see tables on right)
» stainless steel support frame fitted with quick-release locking

Options

» filter medium in various pore sizes (see table on right)
» pressure gauges upstream and downstream of the filter element
» various seal materials suitable for your medium
» special versions on request

Operating instructions, know how and safety instructions must be observed. All the pressure has always been indicated as overpressure. We reserve the right to alter technical specifications without notice.

Filter Mat

mat no.	size of pores mm	dust restraint capacity with testdust, limit grain 0.005 mm
